SCIENTIFIC OUTLOOK

Somebody believes in God

Nobody has seen him so far

Where has he gone?

If he exists in the universe

What are his dimensions?

If you say he is every where

How much mass does he have?

Does he change his mass whenever he wants?

If he has the capacity to change his mass

What does physics talk about this?

as mass does not change

Did he create the universe?

If he created the universe

What is the role of law of conservation of energy?

If your answer is yes

Why cannot you add except God in that law

A good teacher, writer and scientist cannot believe in God

Believe scientific things

Unbelief unscientific things.

THINK AT ONCE

Do you know?

Who abhors always you?

Do you know?

Who abases always you?

Do you know?

Who abashes always you?

If you know the answer

Would you like to abdicate your life?

Otherwise he will abduct your life

If you do not abort his actions

He will abolish your life

If you want to continue your life

Struggle is the only solution

That's why choose a suitable struggle

MESSAGE

O my school children!

O my college youth!

What would you be?

Would you be a doctor or an engineer?

Would you be a scientist or a communist?

Would you be a politician or a factionalist?

Would you be a secularist or religionist?

Even if you would not be anything

You should not fall down to the culture of poison

That smashes down the human relations.

.....

LOOK AT ONCE

There is a sent in sentiment

Think in thinking

Rational thinking makes right man

But sentiment never does

There is love in lover

He loves

Loving and being loved

There is drink in drinker

He enjoys drink

Enjoys drink

But drink drinks him later

There is smoke in smoking

He enjoys smoke

Enjoys smoke

Smoke smokes him later

He speaks with his mouth

Jeers with his fore head

.....
